## Elementary Protocols

### Introduction

Unrestricted  
Stop-and-Wait  
Noisy Channel

- Assumptions & Declarations
- Unrestricted Simplex Protocol
- Simplex Stop and Wait protocol
- Simplex Protocol for a noisy channel

## Assumptions

### Introduction

Unrestricted  
Stop-and-Wait  
Noisy Channel

- Physical, Data link & network are all \_\_\_\_\_
- Service being provided is \_\_\_\_\_
- Data is always available \_\_\_\_\_
- Machines do not crash \_\_\_\_\_
- Treat all data as pure data although \_\_\_\_\_
- Assume the existence of the Physical layer including
  - to\_physical\_layer \_\_\_\_\_
  - from\_physical\_layer \_\_\_\_\_
  - Computation of the checksum

## More assumptions

### Introduction

Unrestricted  
Stop-and-Wait  
Noisy Channel

- wait\_for\_event \_\_\_\_\_
  - Normally this would be done with \_\_\_\_\_
- Frame arrival will either cause
  - event = frame\_arrival \_\_\_\_\_
  - event = cksum\_err \_\_\_\_\_
  - If everything is OK \_\_\_\_\_

# Data Types

## Introduction

Unrestricted  
Stop-and-Wait  
Noisy Channel

```
#define MAX_PKT 1024                                /* determines packet size in bytes */

typedef enum {false, true} boolean;                  /* boolean type */
typedef unsigned int seq_nr;                          /* sequence or ack numbers */
typedef struct {unsigned char data[MAX_PKT];} packet; /* packet definition */
typedef enum {data, ack, nak} frame_kind;             /* frame_kind definition */

typedef struct {                                      /* frames are transported in this layer */
    frame_kind kind;                                  /* what kind of a frame is it? */
    seq_nr seq;                                       /* sequence number */
    seq_nr ack;                                       /* acknowledgement number */
    packet info;                                      /* the network layer packet */
} frame;
```

# Function definitions

## Introduction

Unrestricted  
Stop-and-Wait  
Noisy Channel

```
/* Wait for an event to happen; return its type in event. */
void wait_for_event(event_type *event);

/* Fetch a packet from the network layer for transmission on the channel. */
void from_network_layer(packet *p);

/* Deliver information from an inbound frame to the network layer. */
void to_network_layer(packet *p);

/* Go get an inbound frame from the physical layer and copy it to r. */
void from_physical_layer(frame *r);

/* Pass the frame to the physical layer for transmission. */
void to_physical_layer(frame *s);

/* Start the clock running and enable the timeout event. */
void start_timer(seq_nr k);

/* Stop the clock and disable the timeout event. */
void stop_timer(seq_nr k);

/* Start an auxiliary timer and enable the ack_timeout event. */
void start_ack_timer(void);

/* Stop the auxiliary timer and disable the ack_timeout event. */
void stop_ack_timer(void);

/* Allow the network layer to cause a network_layer_ready event. */
void enable_network_layer(void);

/* Forbid the network layer from causing a network_layer_ready event. */
void disable_network_layer(void);

/* Macro inc is expanded in-line: Increment k circularly. */
#define inc(k) if (k < MAX_SEQ) k = k + 1; else k = 0
```

## Unrestricted Simplex Protocol

Introduction  
**Unrestricted**  
Stop-and-Wait  
Noisy Channel

- Data transmission \_\_\_\_\_
- Communication channel \_\_\_\_\_
- Processing time \_\_\_\_\_
- Buffer Space \_\_\_\_\_

## Sender

Introduction  
**Unrestricted**  
Stop-and-Wait  
Noisy Channel

```
void sender1(void){  
    frame s;  
    packet buffer;  
    while (true) {  
        from_network_layer(&buffer);  
        s.info = buffer;  
        to_physical_layer(&s);  
    }  
}
```

## Receiver

Introduction  
**Unrestricted**  
 Stop-and-Wait  
 Noisy Channel

```
void receiver1(void){
    frame r;
    event_type event;
    while (true) {
        wait_for_event(&event);
        from_physical_layer(&r);
        to_network_layer(&r.info);
    }
}
```

9

## Stop-and-Wait Protocol

Introduction  
 Unrestricted  
**Stop-and-Wait**  
 Noisy Channel

- Data transmission \_\_\_\_\_
- Communication channel \_\_\_\_\_
- Processing time \_\_\_\_\_
- Buffer Space \_\_\_\_\_
- The receiver can be flooded by the sender. To prevent this we can...
  - Insert delays \_\_\_\_\_
  - Give feedback to sender \_\_\_\_\_
  - Stop-and-Wait \_\_\_\_\_
- Half Duplex \_\_\_\_\_

10

## Sender

Introduction  
Unrestricted  
**Stop-and-Wait**  
Noisy Channel

```
void sender2(void){  
    frame s;  
    packet buffer;  
    event_type event;  
    while (true) {  
        from_network_layer(&buffer);  
        s.info = buffer;  
        to_physical_layer(&s);  
        wait_for_event(&event);  
    }  
}
```

11

## Receiver

Introduction  
Unrestricted  
**Stop-and-Wait**  
Noisy Channel

```
void receiver2(void){  
    frame r, s;  
    event_type event;  
    while (true) {  
        wait_for_event(&event);  
        from_physical_layer(&r);  
        to_network_layer(&r.info);  
        to_physical_layer(&s);  
    }  
}
```

## Protocol for a Noisy Channel

- Data transmission \_\_\_\_\_
- Communication channel \_\_\_\_\_
  - Corrupt Frames \_\_\_\_\_
  - Missing Frames \_\_\_\_\_
- Solution
  - Use a timer: \_\_\_\_\_
  - Problem: \_\_\_\_\_
  - Use Sequence Numbers: \_\_\_\_\_
  - PAR/ARQ: \_\_\_\_\_
