Laboratory Report:

Reports should be handed up at the subsequent laboratory session for your group. Your name, group number and the date should be clearly indicated on the cover page. The report should be written with a pen and be neat and concise (use a ruler for the circuit diagrams, plots and tables). Explanations should be brief but complete. Marks will be awarded ~25% for the presentation of results, ~25% for the explanation and interpretation of these results and ~50% for the exercises. The work should be completed on A4 paper – duly bound.
